

## WHY AUGER TORQUE'S EARTH DRILLS ARE THE NUMBER ONE CHOICE

Every day we all aim to deliver the best job possible. It's an ongoing quest for all of us to improve productivity, efficiency and reliability. The tools that we use are paramount to helping us in achieving this. So, when it comes to choosing an earth drill, how do you choose the right supplier and what are you looking for when it comes to choosing?

Auger Torque have become world leaders in the design and manufacture of earthmoving attachments and have become instantly recognisable, worldwide, as the quality blue and yellow brand. Amongst its leading product lines are its earth drills (also known as Auger Drives), the extensive range gives you complete versatility, peace of mind and efficiency. Developed to work with all makes and models of parent machine, and complemented with a range of attachments, you will find an earth drill and attachment for your every need. With the versatility to easily switch between attachments depending on the job at hand, the Auger Torque Earth Drill will deliver, time and again from fencing to screw pile installation, from tree planting to well boring.

The Auger Torque earth drill is built with the end user in mind, working closely with operators and key contractors to develop the best product possible for the demands of today's jobs. They are among the few that are proven to be tough enough and versatile enough to handle the variety of ground conditions across the world.

**What's so special about the Auger Torque earth drill you ask? I'll break it down for you...**

## HIGH QUALITY HYDRAULIC MOTORS

Auger Torque will only work with the best manufacturers in the market, meaning the low maintenance hydraulic motors used in the earth drills are of the highest quality and manufacturing standards possible, resulting in optimum performance and long lifetimes.

## EPICYCLIC PLANETARY GEARBOX

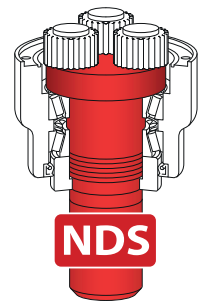

The planetary gearbox system allows the motors output torque to be multiplied with extreme efficiency as well as ensuring the durability and reliability you need. The gearboxes are built to the highest quality, and to be both robust and simple meaning anyone can understand them. This type of gearbox serves to increase the lifespan of the earth drill and optimize performance.

### Blue Coloured Oil

An extra feature is the blue coloured gear oil used in the gearbox. This makes fault finding and thus customer support much easier when defining if any leaks are as a result of the gearbox or hydraulic oil from the parent machine.

## NON-DISLODGEEMENT SHAFT

Unique to Auger Torque is the Non-Dislodgement Shaft; a single piece drive shaft assembled top down and locked into the earth drill housing. This design guarantees that the shaft will never fall out, making for a safer work environment, not only for the operator but also for any surrounding workers, a must have for any safety conscious company.

## AND FINALLY....

Ultimately why are the auger torque earth drills so good? Because they have been developed over the last 25 years, refined and improved with new models produced to meet market demands and customer requirements. They are used the world over from Antarctica, to the Middle East, Australia and Europe for applications that include dewatering, research and exploration, fencing, screw piling, landscaping, cable laying, tree planting and so on.

The team at Auger Torque pride themselves on outstanding customer service and when something isn't available or isn't "off the shelf" the production team can support bespoke, one off specials.

There is a reason why Auger Torque products are so highly regarded around the world and are unrivalled in the industry. The global dealer network, the extensive research and development that goes into each product and responding to customer need with availability or ad-hoc specials seems to be what gives them the edge in this competitive market.
